## WS100 Cylinder lift

The easy way to lift, move and position cylinders

The Weld Safe cylinder lift is the ideal way of lifting, moving and positioning gas cylinders safely into place on welding machines.

Designed with safety in mind it greatly reduces the risk of muscular or back injury through manual lifting whilst improving stability during transportation over traditional methods such as cylinder trolleys or churning.

Other uses for the Weld Safe cylinder lift are for movement of cylinders in factories, schools, laboratories and many other industries. For food production and other hygienically operated areas we are able to manufacture the lift in stainless steel, please ask for details.

Designed for use on all 230mm diameter cylinders	
Load Capacity	100kg
Lift Stroke	295mm
Leg width internal	680mm
Lifting Foot	operated hydraulic jack
Lowering Foot	operated pedal
Construction	Fully welded steel
Wheels	Polyurethane castors 75mm front, 100mm swivel on rear.
Finish	Powder coated standard yellow, Other colours available as option.
